

$f(n) = O(g(n))$  if there exist constants ( $c > 0$ ) and ( $n_0 > 0$ ) such that for all ( $n \geq n_0$ ),  
 $f(n) \leq c * g(n)$

$f(n) = 6n^2 + 16$  and  $g(n) = n^2$

Choose  $c = 7$ . Then,

$6n^2 + 16 \leq 7n^2 = 16 \leq n^2$

Solving  $16 \leq n^2$  gives  $n \geq 4$

Thus, take  $n_0 = 4$ . For all  $n \geq n_0$ ,  $6n^2 + 16 \leq 7n^2$

Therefore,  $6n^2 + 16 = O(n^2)$ .

The statement is correct.
